

Iris Currie

IrisALCurrie@gmail.com

Oxford, Ohio

Portfolio: <https://irislc.github.io> || LinkedIn: <linkedin.com/in/iris-currie-3006242a3>

Programming Skills	General: Object Oriented Programming, Data Structures, Linear Algebra, Efficient Refactoring. Development: Systems Programming, Tools Programming, Bug Testing, UI/UX, Software Architecture, Programming Patterns. Game AI: Behavior Trees, Finite State Machines, Goal Oriented Action Planning, A* pathfinding
General Skills	Working in a team, Quality Assurance, Communication, Leadership, Creative Problem Solving
Languages	C++ (17/20), C#, Java, Blueprints(UE5)
Software	Engines: Unity, Unreal Engine 5, Godot IDE's: JetBrains Rider, Visual Studio Code, Visual Studio

Work Experience

Anthos Capital, Playtester

May 2025 - Present

- Play tested multiple unreleased games from early alpha stages to late beta versions.
- Provided feedback on game balance and feel over multiple iterations as well as aiding in stress testing servers for upcoming vehicle combat game Tyr.
- Tested and gave feedback on unique game modes, UI/UX, and hero/weapon balance in an unreleased team-based hero shooter.

MakeTank, Intern

Summer 2024

Oxford, OH

- Programmed additions to company website via JavaScript & HTML
- Editor for "The Illustrated Memoir Project Anthology Vol.1".

Personal Experience*

SPIRAL (Working Title)

March 2026 - Present

Lead programmer on an in-development Unity game as part of my Senior Capstone. Playable vertical slice on itch.io, Steam release coming Spring 2027.

- Collaborating with a team of 5, including 2 other programmers
- Programmed numerous game systems, from player control, to NPC AI, to UI systems.
- Programmed developer tools meant to aid non-programmer team members in creating puzzles for the player.
- Programmed developer tools for playtests to aggregate data generated from player activity.
- In charge of system architecture and implementing programming patterns.
- Refactored multiple areas of the codebase, working across the team's code, to implement Unit Testing frameworks.
- Created a data driven finite state machine for use in multiple areas of the game.
- In charge of maintaining version control for the project.
- Created system for managing the handling of bugs, exploits, and other issues that arise during playtests and general development.

UE5 AI Prototypes (Personal Project)

Winter 2026

To better understand Unreal Engine 5 C++, as well as learn more about Game AI I spent 2 weeks researching and creating an implementation of Goal Oriented Action Planning.

- Research included reading the original GOAP papers and watching GDC talks
- GOAP implementation written entirely in C++ and uses a modified A* planner algorithm.

**More projects available on my portfolio website*

Education

Miami University Honors College Jan, 2023 - May, 2027

Games & Simulation Major, Computer Science Minor

Cumulative 3.73 GPA
