Education

Talawanda High School

Magna cum laude honors diploma awarded May, 2022

Miami University Honors College

Games & Simulation Major

Computer Science Minor

Expected graduation May, 2027

Work Experience

MakeTank, Intern

Summer 2024

Oxford, OH

- Interned for the non-profit Maketank Inc.
- Edited together 16 of their Illustrated Memoirs using Adobe InDesign to create "The Illustrated Memoir Project Anthology Vol.1".
- Worked on the organization's website, including advising changes.
- Helped redesign the logo for the organization.

Anthos Capital, Playtester

Summer 2025 - Present

- Playtested various games from early alpha stages to late beta versions, providing feedback to developers on systems and gameplay design and balance.

Personal Experience*

Infiltrator (Student Project)

Spring 2025

A FPS, stealth game developed for a class in Indie Game Development. This project blends 2D pixel art and 3D assets to create a unique visual experience for the player. Developed in Unity, Game demo available on itch.io.

- Co-led a team of 6 developers throughout a semester
- Primarily served as a Programmer and the Level Designer
- Implemented a Finite State Machine to control the enemy AI, along with multiple types of enemies, modifiable patrol routes, separation between individual enemies' awareness of the player, and realistic sound systems for enemies to hear the player
- Worked to debug code from both myself and other programmers, and worked to maintain the Github repository
- Created an in engine tool to allow non-programmers to visually set patrol routes and paths

UE5 AI Prototypes (Personal Project)

Winter 2026

To better understand Unreal Engine 5 C++, as well as learn more about Game AI I spent 2 weeks researching and creating an implementation of Goal Oriented Action Planning.

- Research included Unity tutorials and reading the original GOAP paper that came out following the release of FEAR, as well as watching GDC talks from people on the FEAR team.
- GOAP implementation written entirely in C++ and uses a custom A* planner algorithm.
- Also created a FSM implementation in C++ based on the one used for Infiltrator as practice.

**More projects available on my portfolio website*

Skills

- Experience coding games in C#, C++, and Java
- Knowledgeable in Object Oriented Programming best practices
- Experience implementing Game AI with Behavior trees, Finite State Machines, and Goal Oriented Action Planning
- Experience with using A* for Pathfinding
- Has participated in creating games with very short turn around times, from 3 months down to 4 days
- Understanding of Computer Graphics, and building raytracing and rasterization based programs in C++
- Experience creating puzzles, and creating and solving ARG's
- Experience with UI/UX design
- Experience with Level Design and Set Dressing

Software

Game Engines

- Unity
- Unreal Engine 5
- Game Maker
- Godot

IDE's

- JetBrains Rider
- Visual Studio
- Visual Studio Code
- Eclipse
